LUCAS RIBEIRO BOSSA

SOC Analyst | Security Operations

Longwood, FL | 407-459-6549 | lrbossa88@gmail.com | linkedin.com/in/lrbossa88 | github.com/lrbossa88

PROFESSIONAL SUMMARY

Cybersecurity professional working toward a SOC Analyst Tier 1 role. I built a home lab where I run attacks against my own VMs, find them in the logs, packet captures and a Wazuh SIEM, and document them like real incidents with triage notes, severity and MITRE ATT&CK mapping. Background in team leadership and handling sensitive personnel records. Fluent in English, Portuguese and Spanish.

TECHNICAL SKILLS

SIEM and Security Tools: Wazuh (alert triage, custom detection rules), fail2ban, Kali Linux, nmap, Hydra, VirusTotal, IDS/IPS

Log and Traffic Analysis: Linux Auth Logs, journalctl, Wireshark, tcpdump, Packet Capture (PCAP) Analysis

SOC Operations: Alert Triage, Incident Classification, Severity Assessment, Escalation, Incident Documentation, IOC Analysis

Networking: TCP/IP, TCP/UDP, DNS, DHCP, HTTP/HTTPS, ICMP, SSH, Firewalls, Network Segmentation

Systems and Scripting: Linux CLI (Ubuntu, Kali), Windows, Oracle VirtualBox, SQL, Python, Bash, Regex

Frameworks: MITRE ATT&CK, NIST CSF, NIST SP 800-53, Least Privilege, Defense in Depth

HOME LAB PROJECTS

Kali, Ubuntu and Wazuh VMs on an isolated VirtualBox network. Full write-ups: github.com/lrbossa88/cybersecurity-portfolio

SIEM Detection with Wazuh Nov 2026

- Deployed a Wazuh SIEM with an Ubuntu agent and triaged brute force alerts by rule, severity, source IP and target account
- Found a detection gap: a successful login right after failed attempts only raised a level 3 alert, the same as a normal login
- Wrote a custom Wazuh rule that raises a level 12 alert for that pattern, mapped to MITRE T1110.001 and T1078, and tested that it fired on the attack and stayed quiet on normal logins

Network Traffic Investigation Nov 2026

- Captured a baseline, an nmap port scan and an SSH brute force with tcpdump and analyzed them in Wireshark. Identified the scan by 1,000 SYNs in 0.21 seconds with no completed handshakes and by nmap's packet fingerprint
- Showed the encrypted brute force only appeared as 5 connections on the wire and confirmed the fail2ban block

Linux SSH Attack Detection and Defensive Validation Nov 2026

- Ran a controlled Hydra brute force, matched all 20 failed attempts in the logs, wrote triage notes with MITRE mapping
- Set up fail2ban, caught and fixed a log matching issue that would have kept it from seeing any failures, and re-tested: attacker banned in about 4 seconds and attempts reaching SSH cut from 20 to 4

CERTIFICATIONS AND TRAINING

Google Cybersecurity Professional Certificate (Coursera) Completed Sep 2026

- **Coursework:** SQL queries to investigate suspicious logins, Linux user and permission management, Python script to automate an IP allow list, incident handler's journal (ransomware, phishing file hash in VirusTotal), data leak review against NIST SP 800-53

Palo Alto Networks Cortex Foundations Completed May 2026

- **Courses:** SOC processes, threat investigations, endpoint, network and cloud security, automation and orchestration (SOAR), Cortex XSIAM concepts

CompTIA Security+ (SY0-701) In Progress

PROFESSIONAL EXPERIENCE

Mechanical One | Lead Underground Cable Installer 2022 – 2023

- Led a crew of eight employees performing underground electrical service installations
- Coordinated daily field operations, work assignments, materials, and equipment
- Maintained job documentation and ensured work was completed according to required procedures

Massey Services | HR Specialist 2021 – 2022

- Maintained employee records and documentation while handling sensitive personnel information
- Coordinated onboarding requirements with employees and internal stakeholders

Hospitality | Server / Team Lead 2007 – 2021

- Moved up to team lead and trainer in high volume restaurants like Fogo de Chao, The Melting Pot and Brio
